HYDROXAMIC AND CARBOXYLIC ACID DERIVATIVES HAVING MMP
AND TNF INHIBITORY ACTIVITY

Field of the Invention

This invention relates to hydroxamic and carboxylic acid derivatives, and to their
5 use in medicine.

Background to the Invention

Metalloproteinases, including matrix metalloproteinases (MMPs), (human
fibroblast) collagenase, gelatinase and TNF convertase (TACE), and their modes of action,
and also inhibitors thereof and their clinical effects, are described in WO-A-9611209, WO-
10 A-9712902 and WO-A-9719075, the contents of which are incorporated herein by
reference. MMP inhibitors may also be useful in the inhibition of other mammalian
metalloproteinases such as the adamalysin family (or ADAMs) whose members include
TNF convertase (TACE) and ADAM-10, which can cause the release of TNF α from cells,
and others, which have been demonstrated to be expressed by human articular cartilage
15 cells and also involved in the destruction of myelin basic protein, a phenomenon associated
with multiple sclerosis.

Compounds which have the property of inhibiting the action of metalloproteinases
involved in connective tissue breakdown, such as collagenases, stromelysins and
gelatinases, have been shown to inhibit the release of TNF both *in vitro* and *in vivo*. See
20 Gearing *et al* (1994), Nature 370:555-557; McGeehan *et al* (1994), Nature 370:558-
561; GB-A-2268934; and WO-A-9320047. All of these reported inhibitors contain a
hydroxamic acid zinc-binding group, as do the imidazole-substituted compounds disclosed
in WO-A-9523790. Other compounds that inhibit MMP and/or TNF are described in
WO-A-9513289, WO-A-9611209, WO-A-96035687, WO-A-96035711, WO-A-
25 96035712 and WO-A-96035714.

Summary of the Invention

The invention encompasses compounds which are useful inhibitors of matrix
metalloproteinases and/or TNF α -mediated diseases, including degenerative diseases and
certain cancers. These compounds are represented by formula (I):

10 wherein

m is 0-2;

X is S(O)₁₋₂;

Y is OH or NHOH;

15 R¹ is H or a group (optionally substituted with R⁷) selected from C₁₋₆ alkyl, C₂₋₆ alkenyl, aryl, C₁₋₆ alkyl-aryl, heteroaryl, C₁₋₆ alkyl-heteroaryl, heterocycloalkyl, C₁₋₆ alkyl-heterocycloalkyl, cycloalkyl and C₁₋₆ alkyl-cycloalkyl, and R² is H or C₁₋₆ alkyl;

or CR¹R² is a cycloalkyl or heterocycloalkyl ring optionally substituted with R⁷ or a group (optionally substituted with R⁷) selected from C₁₋₆ alkyl, aryl, C₁₋₆ alkyl-aryl, heteroaryl and C₁₋₆ alkyl-heteroaryl;

20 each B is the same or different and is H or a group selected from C₁₋₆ alkyl-aryl, C₁₋₆ alkyl, cycloalkyl, C₁₋₆ alkyl-cycloalkyl, cycloalkenyl, heterocycloalkenyl, C₁₋₆ alkyl-heteroaryl, heterocycloalkyl, C₁₋₆ alkyl-heterocycloalkyl, aryl or heteroaryl, any of which groups is optionally substituted by a substituent selected from R³, C₁₋₆ alkyl-R³, C₂₋₆ alkenyl-R³, aryl (optionally substituted with R³), aryl-C₁₋₆ alkyl-R³, C₁₋₆ alkyl-aryl (optionally substituted with R³), C₁₋₆ alkyl-heteroaryl (optionally substituted with R³), aryl-C₂₋₆ alkenyl-R³, heteroaryl (optionally substituted with R³), heteroaryl-C₁₋₆ alkyl-R³, cycloalkyl (optionally substituted with R³) and heterocycloalkyl (optionally substituted with R³), provided that NB₂ is not NH₂,

or B-N-B is a heterocycloalkyl ring substituted with =O or =NOR⁴,

30 or, when neither of R¹ and R² is H, B-N-B is a heterocycloalkyl or heterocycloalkenyl ring optionally substituted by a substituent selected from R³, C₁₋₆ alkyl-R³, C₂₋₆ alkenyl-R³, aryl (optionally substituted with R³), aryl-C₁₋₆ alkyl-R³, C₁₋₆ alkyl-aryl (optionally substituted with R³), C₁₋₆ alkyl-heteroaryl (optionally substituted with R³), aryl-C₂₋₆ alkenyl-R³, heteroaryl (optionally substituted with R³), heteroaryl-C₁₋₆ alkyl-R³,

cycloalkyl (optionally substituted with R^3), and heterocycloalkyl (optionally substituted with R^3);

R^3 is C_{1-6} alkyl, C_{2-6} alkenyl- R^5 , halogen, CN, NO_2 , $N(R^4)_2$, OR^4 , $C(=NOR^6)R^4$, $CON(R^4)_2$, COR^4 , CO_2R^4 , NR^4R^5 , $S(O)_{0-2}R^6$ or $SO_2N(R^4)_2$;

- 5 R^4 is H or a group selected from C_{1-6} alkyl, aryl, C_{1-6} alkyl-aryl, heteroaryl, C_{1-6} alkyl-heteroaryl, cycloalkyl, C_{1-6} alkyl-cycloalkyl, heterocycloalkyl and C_{1-6} alkyl-heterocycloalkyl, wherein said group is optionally substituted with R^6 , COR^6 , $SO_{0-2}R^6$, CO_2R^6 , OR^6 , $CONR^6R^6$, NR^6R^6 , halogen, CN, $SO_2NR^6R^6$ or NO_2 , and for each case of $N(R^4)_2$ the R^4 groups are the same or different or $N(R^4)_2$ is heterocycloalkyl optionally substituted with R^6 , COR^6 , $SO_{0-2}R^6$, CO_2R^6 , OR^6 , $CONR^6R^6$, NR^6R^6 , halogen, CN, $SO_2NR^6R^6$ or NO_2 ;

R^5 is COR^4 , $CON(R^4)_2$, CO_2R^6 or SO_2R^6 ;

R^6 is C_{1-6} alkyl, aryl, C_{1-6} alkyl-aryl, heteroaryl or C_{1-6} alkyl-heteroaryl; and

- 10 R^7 is OR^4 , COR^4 , CO_2R^4 , $CON(R^4)_2$, NR^4R^5 , $S(O)_{0-2}R^6$, $SO_2N(R^4)_2$, halogen, CN or cycloimidyl (optionally substituted with R^8); and
- 15 R^8 is H or C_{1-6} alkyl;

and the salts, solvates, hydrates, N-oxides, protected amino, protected carboxy, or protected hydroxamic acid derivatives thereof.

- Compounds of formula (I) are disclosed for the first time as having therapeutic utility. Compounds of formula (I) are new, except those wherein Y is OH and CR^1R^2 is CH_2 or NB_2 is NH_2 , $N(Ph)H$, $N(Ph)CH_3$, $N(C_6H_{11})CH_3$ or $N(4\text{-methoxybenzoyl})_2$.

Combinations of substituents and/or variables are only permissible if such combinations result in stable compounds.

Description of the Invention

- 25 Preferred compounds of the invention are those wherein any one or more of the following apply:

X is SO_2 ;

B is not H;

- B is optionally substituted C_{1-6} alkyl, cycloalkyl, heterocycloalkyl, C_{1-6} alkyl-aryl or C_{1-6} alkyl-heteroaryl;

B-N-B is an optionally substituted heterocycloalkyl ring;

B-N-B is a heterocycloalkyl ring substituted with $=NOR^4$;

30 R^1 is optionally substituted C_{1-6} alkyl, C_{1-6} alkyl-heteroaryl, C_{1-6} alkyl-aryl or C_{1-6} alkyl-heterocycloalkyl;

CR¹R² is the said optionally substituted cycloalkyl or heterocycloalkyl ring;

R³ is C₁₋₆ alkyl, C₂₋₆ alkenyl-R⁵, halogen, CN, NO₂, N(R⁴)₂, OR⁴, COR⁴, NR⁴R⁵, S(O)₀₋₂R⁶ or SO₂N(R⁴)₂; and

R⁷ is CON(R⁴)₂, NR⁴R⁵, SO₂N(R⁴)₂ or cycloimidyl.

5 It will be appreciated that the compounds according to the invention can contain one or more asymmetrically substituted carbon and sulfur atoms. The presence of one or more of these asymmetric centres in a compound of formula (I) can give rise to stereoisomers, and in each case the invention is to be understood to extend to all such stereoisomers, including enantiomers and diastereomers, and mixtures including racemic
10 mixtures thereof.

It will further be appreciated that the compounds according to the invention may contain an oxime. This oxime can give rise to geometrical isomers, and in each case the invention is to be understood to extend to all such isomers and mixtures thereof.

As used in this specification, alone or in combination, the term "C₁₋₆ alkyl" refers
15 to straight or branched chain alkyl moiety having from one to six carbon atoms, including for example, methyl, ethyl, propyl, isopropyl, butyl, *tert*-butyl, pentyl, hexyl and the like.

The term "C₂₋₆ alkenyl" refers to a straight or branched chain alkyl moiety having two to six carbon atoms and having in addition one double bond, of either E or Z stereochemistry where applicable. This term would include for example, vinyl, 1-propenyl,
20 1- and 2- butenyl, 2- methyl-2-propenyl etc.

The term "cycloalkyl" refers to a saturated alicyclic moiety having from three to six carbon atoms and which is optionally benzofused at any available position. This term includes for example cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, indanyl and tetrahydronaphthyl.

25 The term "heterocycloalkyl" refers to a saturated heterocyclic moiety having from three to six carbon atoms and one or more heteroatoms selected from N, O, S and oxidised versions thereof, and which is optionally benzofused at any available position. This term includes, for example, azetidiny, pyrrolidinyl, tetrahydrofuranyl, piperidinyl, indolinyl and tetrahydroquinolinyl.

30 The term "cycloalkenyl" refers to an alicyclic moiety having from three to six carbon atoms and having in addition one double bond. This term includes, for example, cyclopentenyl and cyclohexenyl.

The term "heterocycloalkenyl" refers to an alicyclic moiety having from three to six carbon atoms and one or more heteroatoms selected from N, O, S and oxidised

versions thereof, and having in addition one double bond. This term includes, for example, dihydropyranyl.

The term "aryl" refers to an aromatic carbocyclic radical having a single ring or two condensed rings. This term includes, for example phenyl or naphthyl.

5 The term "heteroaryl" refers to aromatic ring systems of five to ten atoms of which at least one atom is selected from O, N and S, and includes, for example, furanyl, thiophenyl, pyridyl, indolyl, quinolyl and the like.

The term "cycloimidyl" refers to a saturated ring of five to ten atoms containing the atom sequence $-C(=O)NC(=O)-$. The ring may be optionally benzofused at any
10 available position. Examples include succinimidoyl, phthalimidoyl and hydantoinyl.

The term "benzofused" refers to the addition of a benzene ring sharing a common bond with the defined ring system.

The term "optionally substituted" means optionally substituted with one or more of the groups specified, at any available position or positions.

15 The term "halogen" means fluorine, chlorine, bromine or iodine.

The terms "protected amino", "protected carboxy" and "protected hydroxamic acid" mean amino, carboxy and hydroxamic acid groups which can be protected in a manner familiar to those skilled in the art. For example, an amino group can be protected by a benzyloxycarbonyl, *tert*-butoxycarbonyl, acetyl or like group, or may be in the form
20 of a phthalimido or like group. A carboxyl group can be protected in the form of an ester such as the methyl, ethyl, benzyl or *tert*-butyl ester. A hydroxamic acid may be protected as either N or O-substituted derivatives, such as O-benzyl or O-*tert*-butyldimethylsilyl.

Salts of compounds of formula (I) include pharmaceutically-acceptable salts, for example acid addition salts derived from inorganic or organic acids, such as
25 hydrochlorides, hydrobromides, *p*-toluenesulphonates, phosphates, sulphates, perchlorates, acetates, trifluoroacetates, propionates, citrates, malonates, succinates, lactates, oxalates, tartrates and benzoates.

Salts may also be formed with bases. Such salts include salts derived from inorganic or organic bases, for example alkali metal salts such as magnesium or calcium
30 salts, and organic amine salts such as morpholine, piperidine, dimethylamine or diethylamine salts.

When the "protected carboxy" group in compounds of the invention is an esterified carboxyl group, it may be a metabolically-labile ester of formula CO_2R^9 where R^9 may be an ethyl, benzyl, phenethyl, phenylpropyl, α - or β -naphthyl, 2,4-dimethylphenyl, 4-*tert*-

butylphenyl, 2,2,2-trifluoroethyl, 1-(benzyloxy)benzyl, 1-(benzyloxy)ethyl, 2-methyl-1-propionyloxypropyl, 2,4,6-trimethylbenzyloxymethyl or pivaloylmethyl group.

Compounds of the general formula (I) may be prepared by any suitable method known in the art and/or by the following processes.

- 5 It will be appreciated that, where a particular stereoisomer of formula (I) is required, the synthetic processes described herein may be used with the appropriate homochiral starting material and/or isomers maybe resolved from mixtures using conventional separation techniques (e.g. HPLC).

The compounds according to the invention may be prepared by the following
10 process. In the description and formulae below the groups R^1 , R^2 , R^3 , R^4 , R^5 , R^6 , R^7 , R^8 , R^9 , B, X and Y are as defined above, except where otherwise indicated. It will be appreciated that functional groups, such as amino, hydroxyl or carboxyl groups, present in the various compounds described below, and which it is desired to retain, may need to be in protected form before any reaction is initiated. In such instances, removal of the
15 protecting group may be the final step in a particular reaction. Suitable protecting groups for such functionality will be apparent to those skilled in the art. For specific details see Greene *et al*, "Protective Groups in Organic Synthesis", Wiley Interscience.

A process for preparing compounds of general formula (I) comprises acylating an amine of formula B_2NH (II) with an acylating agent of formula $Z-X-(CH_2)_m-CR^1R^2-COY$ (III) wherein Z represents a suitable leaving group (e.g. a halogen such as bromine), and
20 Y is OH or NHOH or a protected form thereof. This reaction may be performed in an inert solvent such as tetrahydrofuran, in the presence of an organic or inorganic base.

Acylating agents of formula (III) where $X = SO_2$ may be prepared from $R^{10}S-(CH_2)_m-CR^1R^2-COY$ (IV), where R^{10} is H or a suitable labile group such as acetyl, by
25 treatment with chlorine in an appropriate solvent such as water at an appropriate temperature such as $0^\circ C$. Acylating agents of formula (III) where $X = SO$ may also be prepared from compound (IV) by treatment with SO_2Cl_2 and acetic anhydride in an appropriate solvent such as dichloromethane at an appropriate temperature such as $0^\circ C$.

Sulfanyl compounds of formula (IV) are readily prepared by alkylation of a
30 compound $R^{10}SH$ with an alkylating agent of the form $Z^A-(CH_2)_m-CR^1R^2-COY$ (V), where Z^A is a leaving group (e.g. a halogen such as bromine, or an alkylsulfonate ester such as methanesulfonate). Many compounds of formula (V) are available commercially, or may be prepared by standard chemistry known to those skilled in the art from materials available commercially.

Compounds of formula (V) where $m=1$ may be prepared from compounds of formula $\text{HOCH}_2\text{CR}^1\text{R}^2\text{COY}$ (VI). Thus, for example, a compound of formula (V) where Z^A is methanesulfonate may be prepared by treatment of a compound of formula (VI) with methanesulfonyl chloride in the presence of an organic base such as triethylamine in an inert solvent such as dichloromethane.

Compounds of formula (VI) may be prepared by the reduction of compounds of formula $\text{R}^{11}\text{O}_2\text{CCR}^1\text{R}^2\text{COY}$ (VII), where COOR^{11} represents a suitable ester, e.g. an ethyl ester. Suitable conditions for the reduction comprise the use of diisobutylaluminium hydride in toluene at -40°C .

Compounds of formula (VII) may be prepared by the sequential alkylation of, for example, diethyl malonate, with alkylating agents of formula $\text{R}^1\text{-Z}^A$ (VIII) and $\text{R}^2\text{-Z}^A$ (IX), wherein Z^A is as defined above, followed by hydrolysis under basic conditions. Many alkylating agents of formula (VIII) or (IX) are available commercially or may be prepared from materials available commercially by methods known to those skilled in the art.

Compounds of formula (IV) where $m = 1$ and $\text{R}^2 = \text{H}$ may also be prepared by the reaction of a compound R^{10}SH with an acrylate of the form $\text{H}_2\text{C}=\text{CR}^1\text{CO}_2\text{H}$ (X). Compounds of formula (X) may be prepared by the Mannich reaction (i.e. with paraformaldehyde and piperidine in a suitable organic solvent, such as 1,4-dioxane) on a dicarboxylic acid of general formula $\text{HO}_2\text{C-CHR}^1\text{-CO}_2\text{H}$ (XI). This reaction involves an eliminative decarboxylation step, resulting in the formation of an α,β -unsaturated carboxylic acid (i.e. where $\text{Y}=\text{OH}$) directly.

Dicarboxylic acids of formula (XI) may be prepared by the alkylation of, for instance, diethyl malonate with an alkylating agent of formula $\text{R}^1\text{-Z}^A$ (VIII), wherein Z^A is as defined above, followed by hydrolysis under basic conditions.

Amines of the structure depicted in formula (II) are commercially available or may be prepared by standard aromatic, heteroaromatic or other chemistry known to those skilled in the art, from materials available commercially.

Compounds of formula (I) may also be prepared by interconversion of other compounds of formula (I). Thus, for example, a compound of formula (I) wherein R^1 is a C_{1-6} alkyl group may be prepared by hydrogenation (using palladium on carbon in suitable solvent, such as an alcohol, e.g. ethanol) of a compound of formula (I) wherein R^1 is a C_{2-6} alkenyl group. Similarly, a compound of formula (I) where $\text{X}=\text{SO}_2$ may be prepared from a compound of formula (I) where $\text{X}=\text{SO}$ by oxidation with, for example sodium periodate and ruthenium chloride trihydrate in an appropriate solvent, for example

acetonitrile-tetrachloromethane-water. Acids of general formula (I) ($Y=OH$) may be converted to hydroxamic acids ($Y=NHOH$) using methods known to those skilled in the art.

Any mixtures of final products or intermediates obtained can be separated on the basis of the physico-chemical differences of the constituents, in known manner, into the pure final products or intermediates, for example by chromatography, distillation, fractional crystallization, or by formation of a salt if appropriate or possible under the circumstances.

The compounds according to the invention exhibit *in vitro* inhibiting activities with respect to the stromelysins, collagenases and gelatinases. Compounds according to the invention may also exhibit *in vitro* inhibition of membrane shedding events known to be mediated by metalloproteinases, for example, TNF release, TNF receptor shedding, IL-6 receptor shedding, IL-1 receptor shedding, CD23 shedding and L-selectin shedding. The activity and selectivity of the compounds may be determined by use of the appropriate enzyme inhibition test, for example as described in Examples A-M of WO 98/05635, or by the following assay for the inhibition of CD23 shedding.

The potency of compounds of general formula (I) to act as inhibitors of the shedding of CD23 is determined using the following procedure: a 100 μ M solution of the compound being tested, or dilutions thereof, is incubated at 37°C in an atmosphere of 5% CO₂ with RPMI 8866 cells, which shed CD23 spontaneously without stimulation. After 1 h, the cells are removed by centrifugation and the supernatant assayed for levels of sCD23 using an ELISA kit available commercially. The activity in the presence of 0.1 mM inhibitor, or dilutions thereof, is compared to activity in a control devoid of inhibitor and the results reported as that inhibitor concentration effecting 50% inhibition of the shedding of CD23.

This invention also relates to a method of treatment for patients (including man and/or mammalian animals raised in the dairy, meat or fur industries or as pets) suffering from disorders or diseases which can be attributed to MMPs as previously described, and more specifically, a method of treatment involving the administration of the matrix metalloproteinase inhibitors of formula (I) as the active constituents.

Accordingly, the compounds of formula (I) can be used among other things in the treatment of osteoarthritis and rheumatoid arthritis, and in diseases and indications resulting from the over-expression of these matrix metalloproteinases such as found in certain metastatic tumour cell lines.

As mentioned above, compounds of formula (I) are useful in human or veterinary medicine since they are active as inhibitors of TNF and MMPs. Accordingly in another aspect, this invention concerns:

5 a method of management (by which is meant treatment or prophylaxis) of disease or conditions mediated by TNF and/or MMPs in mammals, in particular in humans, which method comprises administering to the mammal an effective, amount of a compound of formula (I) above, or a pharmaceutically acceptable salt thereof; and

a compound of formula (I) for use in human or veterinary medicine, particularly in the management (by which is meant treatment or prophylaxis) of diseases or conditions
10 mediated by TNF and/or MMPs; and

the use of a compound of formula (I) in the preparation of an agent for the management (by which is meant treatment or prophylaxis) of diseases or conditions mediated by TNF and/or MMPs.

The disease or conditions referred to above include inflammatory diseases,
15 autoimmune diseases cancer, cardiovascular diseases, diseases involving tissue breakdown such as rheumatoid arthritis, osteoarthritis, osteoporosis, neurodegeneration, Alzheimer's disease, stroke, vasculitis, Crohn's disease, ulcerative colitis, multiple sclerosis, periodontitis, gingivitis and those involving tissue breakdown such as bone resorption, haemorrhage, coagulation, acute phase response, cachexia and anorexia, acute infections,
20 HIV infections, fever, shock states, graft versus host reactions, dermatological conditions, surgical wound healing, psoriasis, atopic dermatitis, epidermolysis bullosa, tumour growth, angiogenesis and invasion by secondary metastases, ophthalmological disease, retinopathy, corneal ulceration, reperfusion injury, migraine, meningitis, asthma, rhinitis, allergic conjunctivitis, eczema, anaphylaxis, restenosis, congestive heart failure, endometriosis,
25 atherosclerosis, endosclerosis and aspirin-independent anti-thrombosis.

Compounds of formula (I) may also be useful in the treatment of pelvic inflammatory disease (PID), age-related macular degeneration and cancer-induced bone resorption. Further, they can be used in the treatment of lung diseases, e.g. selected from cystic fibrosis, adult respiratory distress syndrome (ARDS), emphysema, bronchitis
30 obliterans-organising pneumonia (BOOP), idiopathic pulmonary fibrosis (PIF), diffuse alveolar damage, pulmonary Langerhan's cell granulomatosis, pulmonary lymphangioleiomyomatosis (LAM) and chronic obstructive pulmonary disease (COPD).

For the treatment of rheumatoid arthritis, osteoarthritis, and in diseases and indications resulting from the over-expression of matrix metalloendoproteinases such as

found in certain metastatic tumour cell lines or other diseases mediated by the matrix metalloendoproteinases or increased TNF production, the compounds of formula (I) may be administered orally, topically, parenterally, by inhalation spray or rectally in dosage unit formulations containing non-toxic pharmaceutically acceptable carriers, adjuvants and
5 vehicles. The term parenteral as used herein includes subcutaneous injections, intravenous, intramuscular, intrasternal injection or infusion techniques. In addition to the treatment of warm-blooded animals such as mice, rats, horses, cattle, sheep, dogs, cats etc, the compounds of the invention are effective in the treatment of humans.

The pharmaceutical composition containing the active ingredient may be in a form
10 suitable for oral use, for example, as tablets, troches, lozenges, aqueous or oily suspensions, dispersible powders or granules, emulsions, hard or soft capsules, or syrups or elixirs. Compositions intended for oral use may be prepared according to any method known to the art for the manufacture of pharmaceutical compositions and such compositions may contain one or more agents selected from the group consisting of
15 sweetening agents, flavouring agents, colouring agents and preserving agents in order to provide pharmaceutically elegant and palatable preparations. Tablets contain the active ingredient in admixture with non-toxic pharmaceutically acceptable excipients which are suitable for the manufacture of tablets. These excipients may be for example, inert diluents, such as calcium carbonate, sodium carbonate, lactose, calcium phosphate or
20 sodium phosphate; granulating and disintegrating agents, for example corn starch, or alginic acid; binding agents, for example starch, gelatin or acacia, and lubricating agents, for example magnesium stearate, stearic acid or talc. The tablets may be uncoated or they may be coated by known techniques to delay disintegration and absorption in the gastrointestinal tract and thereby provide a sustained action over a longer period. For
25 example, a time delay material such as glyceryl monostearate or glyceryl distearate may be employed. They may also be coated by the techniques described in the US Patents 4,256,108; 4,166,452; and 4,265,874, to form osmotic therapeutic tablets for control release.

Formulations for oral use may also be presented as hard gelatin capsules where in
30 the active ingredient is mixed with an inert solid diluent, for example calcium carbonate, calcium phosphate or kaolin, or as soft gelatin capsules wherein the active ingredient is mixed with water or an oil medium, for example peanut oil, liquid paraffin or olive oil. Aqueous suspensions contain the active materials in admixture with excipients suitable for the manufacture of aqueous suspensions. Such excipients are suspending agents, for

example sodium carboxymethylcellulose, methylcellulose, hydroxy-propylmethylcellulose, sodium alginate polyvinyl-pyrrolidone, gum tragacanth and gum acacia; dispersing or wetting agents may be a naturally occurring phosphatide, for example lecithin, or condensation products of an alkylene oxide with fatty acids, for example polyoxyethylene stearate, or condensation products of ethylene oxide with long chain aliphatic alcohols, for example heptadecaethyleneoxycetanol, or condensation products of ethylene oxide with partial esters derived from fatty acids and a hexitol such a polyoxyethylene with partial esters derived from fatty acids and hexitol anhydrides, for example polyoxyethylene sorbitan monooleate. The aqueous suspensions may also contain one or more preservatives, for example ethyl, or n-propyl, p-hydroxybenzoate, one or more colouring agents, one or more flavouring agents, and one or more sweetening agents, such as sucrose or saccharin.

Oily suspensions may be formulated by suspending the active ingredient in a vegetable oil, for example arachis oil, olive oil, sesame oil or coconut oil, or in a mineral oil such as liquid paraffin. The oily suspensions may contain a thickening agent, for example beeswax, hard paraffin or cetyl alcohol. Sweetening agents such as those set forth above, and flavouring agents may be added to provide a palatable oral preparation. These compositions may be preserved by the addition of an anti-oxidant such as ascorbic acid.

Dispersible powders and granules suitable for preparation of an aqueous suspension by the addition of water provide the active ingredient in admixture with a dispersing or wetting agent, suspending agent and one or more preservatives. Suitable dispersing or wetting agents and suspending agents are exemplified, for example sweetening, flavouring and colouring agents, may also be present.

The pharmaceutical compositions of the invention may also be in the form of oil-in-water emulsions. The oily phase may be a vegetable oil, for example olive oil or arachis oil, or a mineral oil, for example liquid paraffin or mixtures of these. Suitable emulsifying agents may be naturally- occurring gums, for example gum acacia or gum tragacanth, naturally-occurring phosphatides, for example soya bean, lecithin, and esters or partial esters derived from fatty acids and hexitol anhydrides, for example sorbitan monooleate and condensation products of the said partial esters with ethylene oxide, for example polyoxyethylene sorbitan monooleate. The emulsions may also contain sweetening and flavouring agents.

Syrups and elixirs may be formulated with sweetening agents, for example glycerol, propylene glycol, sorbitol or sucrose. Such formulations may also contain a demulcent, a preservative and flavouring and colouring agents. The pharmaceutical compositions may be in the form of a sterile injectable aqueous or oleagenous suspension. This suspension
5 may be formulated according to the known art using those suitable dispersing or wetting agents and suspending agents which have been mentioned above. The sterile injectable preparation may also be in a sterile injectable solution or suspension in a non-toxic parenterally-acceptable diluent or solvent, for example as a solution in 1,3-butane diol. Among the acceptable vehicles and solvents that may be employed are water, Ringer's
10 solution and isotonic sodium chloride solution. In addition, sterile, fixed oils are conventionally employed as a solvent or suspending medium. For this purpose any bland fixed oil may be employed including synthetic mono- or diglycerides. In addition, fatty acids such as oleic acid find use in the preparation of injectables.

The compounds of formula (I) may also be administered in the form of
15 suppositories for rectal administration of the drug. These compositions can be prepared by mixing the drug with a suitable non-irritating excipient which is solid at ordinary temperatures but liquid at the rectal temperature and will therefore melt in the rectum to release the drug. Such materials are cocoa butter and polyethylene glycols.

For topical use, creams, ointments, jellies, solutions or suspensions, etc containing
20 the compounds of Formula (I) are employed. For the purposes of this specification, topical application includes mouth washes and gargles.

Dosage levels of the order of from about 0.05 mg to about 140 mg per kilogram of body weight per day are useful in the treatment of the above- indicated conditions (about 2.5 mg to about 7 g per patient per day). For example, inflammation may be
25 effectively treated by the administration of from about 0.01 to 50 mg of the compound per kilogram of body weight per day (about 0.5 mg to about 3.5 g per patient per day).

The amount of active ingredient that may be combined with the carrier materials to produce a single dosage form will vary depending upon the host treated and the particular mode of administration. For example, a formulation intended for the oral
30 administration of humans may vary from about 5 to about 95% of the total composition. Dosage unit forms will generally contain between from about 1 mg to about 500 mg of active ingredient.

It will be understood, however, that the specific dose level for any particular patient will depend upon a variety of factors including the activity of the specific

compound employed, the age, body weight, general health, sex, diet time of administration, route of administration, rate of excretion, drug combination and the severity of the particular disease undergoing therapy.

The following Examples illustrate the invention.

5 In the Examples, the following abbreviations are used:

	TNF α	Tumour Necrosis Factor α
	LPS	Lipopolysaccharide
	ELISA	Enzyme-linked immunosorbant assay
	EDC	1-Ethyl-2-dimethylaminopropylcarbodiimide
10	RT	Room Temperature

Intermediate 1 3-Iodo-1-(3,4,4-trimethyl-2,5-dioximidazolidin-1-yl)-propane

Sodium hydride (2.2 g) was added to a solution of 3,4,4-trimethylhydantoin (7.1 g) in dimethylformamide (50 ml) at room temperature and the mixture was stirred for 1 h. 3-Chloro-1-bromopropane (4.9 ml) was then added and the solution was stirred
15 overnight. The mixture was then poured into water (300 ml) and extracted with diethyl ether; the ether layer was then dried (MgSO₄) and evaporated and the residue was dissolved in acetone (100 ml) to which was added sodium iodide (10 g). The mixture was heated at reflux for 18 h, then evaporated and the residue was dissolved in diethyl ether and washed with water, then dried (MgSO₄) and evaporated to give the *title compound*
20 (11 g, 70%) as a brown oil.

R_f 0.85 (diethyl ether)

Intermediate 2 Dibenzyl (3-(3,4,4-Trimethyl-2,5-dioximidazolidin-1-yl)-propyl)malonate

A solution of dibenzyl malonate (5.7 g) in anhydrous tetrahydrofuran (200 ml) was
25 treated at 0°C with sodium hydride (60% dispersion in mineral oil, 3.1 g). The mixture was allowed to warm to room temperature and stirred for 30 minutes under nitrogen. The mixture was then treated with a solution of intermediate 1 (6.2 g) in tetrahydrofuran (100 ml) and heated at reflux for 12 hours. The reaction was then cooled, filtered, and the filtrate evaporated *in vacuo*. The residue was partitioned between ethyl acetate (200 ml)
30 and saturated aqueous ammonium chloride (150 ml). The organic layer was washed with water (100 ml), brine (100 ml), dried (MgSO₄), filtered and the filtrate evaporated *in vacuo*. The residue was purified by column chromatography on silica gel eluting with 20% ethyl acetate in hexane to yield the title compound (7.1 g, 80%) as a colourless oil.

R_f 0.53 (diethyl ether)

Intermediate 3 2-Methylene-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)-pentanoic Acid

A solution of intermediate 2 (10 g) in dioxane (200 ml) was treated with 10% palladium on charcoal (1.7 g) and hydrogenated at atmospheric pressure until the hydrogen uptake had ceased. The catalyst was removed by filtration through Celite® and the filtrate treated with piperidine (3.2 g) at room temperature. After 30 minutes the reaction was treated with formaldehyde (37% solution in water; 15 ml), stirred for two hours at room temperature and then heated at 80 °C for two hours. The mixture was cooled, the solvent removed *in vacuo* and the residue partitioned between ethyl acetate (200 ml) and 10% aqueous citric acid (100ml). The organic layer was washed with water (100 ml), brine (100 ml), dried over magnesium sulfate, and filtered, and the filtrate evaporated *in vacuo*. The residue was purified by column chromatography on silica gel eluting with 40% ethyl acetate in hexane to yield the title compound (5.40 g, 95%) as a colourless oil.

15 R_f 0.4 (ethyl acetate)

Intermediate 4 2-Methylene-3-methylbutanoic acid

Morpholine (39.4 g) was added to a solution of isopropylmalonic acid (60.1 g) in water (300 ml) and acetic acid (47 ml). The mixture was stirred for 20 min, then a solution of aqueous formaldehyde (37% aq, 18.54 g) was added. The mixture was stirred at room temperature overnight, then heated at 80°C for 2 h and recooled to room temperature. The mixture was filtered, basified with sodium bicarbonate and washed with dichloromethane (100 ml). The pH was adjusted to 4 with dilute HCl, then the mixture was extracted with dichloromethane (3 x 200 ml). the organic extracts were combined and washed with water and brine, dried (Mg SO₄) and then evaporated to give the title compound as colourless oil (32 g).

25

R_f 0.45 (EtOAc).

Intermediate 5 2-Bromomethyl-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)-pentanoic Acid

Intermediate 3 (5.4 g) was treated with 45% hydrogen bromide in acetic acid (50 ml) at room temperature. After three hours the solution was poured into water (300 ml) and the product extracted with ethyl acetate (3 x 100ml). The organic extracts were combined, washed with water (100 ml), brine (100 ml), dried over magnesium sulfate, and filtered, and the filtrate evaporated *in vacuo*. The residue was dried by azeotrope with toluene (2 x 10ml) to yield the title compound (4.0 g, 56 %) as a viscous oil.

30

R_f 0.35 (ethyl acetate)

Similarly prepared was

Intermediate 6 2-Bromomethyl-3-methylbutanoic Acid

From intermediate 4 (32 g), as colourless liquid (52.3 g).

5 R_f 0.43 (EtOAc).

Intermediate 7 Methyl 2-Bromomethyl-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoate

Acetyl chloride (15 ml) was added to ice cold methanol (200 ml) dropwise over 20 min, then a solution of intermediate 5 (3.5 g) in methanol (20 ml) was added and the solution was stirred at room temperature for 3 h. The mixture was then evaporated *in vacuo* and the residue dissolved in dichloromethane (100 ml) and washed with saturated sodium bicarbonate solution and brine. The solvent was dried and evaporated to give the title compound (2.05 g) as pale yellow oil.

R_f 0.65 (ether).

15 **Intermediate 8 *tert*-Butyl 2-Bromomethyl-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoate**

Isobutylene (100 ml) was added to a solution of the intermediate 5 (36.1 g) and sulfuric acid (1.2 ml) in dichloromethane (110 ml) at -78°C in a Parr pressure reactor. The vessel was sealed and the mixture stirred at room temperature for 24 h, then cooled to -5°C and the solution was removed and washed with saturated sodium carbonate and water, then dried (MgSO₄) and evaporated to give the *title compound* as a colourless oil (35.9 g).

R_f 0.73 (ether).

Similarly prepared was

25 **Intermediate 9 *tert*-Butyl 2-Bromomethyl-3-methylbutanoate**

From intermediate 6 (52.3 g), as colourless liquid (64.0 g).

R_f 0.72 (EtOAc).

Intermediate 10 Methyl 2-Acetylsulfanylmethyl-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoate

30 Potassium thiolacetate (1.2 g) was added to a solution of intermediate 7 (1.5 g) in dimethylformamide (20 ml) at room temperature and the mixture was then heated at 100°C for 3 h. The mixture was added to water and extracted with ether (3 x 50 ml). The solvent was washed with sodium bicarbonate solution, water and brine, the dried (MgSO₄)

and evaporated to give a brown oil. This was purified by silica gel column chromatography, eluting with ether, to give the title compound (1.2 g) as an amber oil.

R_f 0.55 (ether)

Similarly prepared were:

- 5 **Intermediate 11** *tert*-Butyl 2-Acetylsulfanylmethyl-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoate

From intermediate 8 (35.9 g), as a yellow oil (34.5 g).

R_f 0.66 (ether).

- Intermediate 12** *tert*-Butyl 2-Acetylsulfanylmethyl-3-methylbutanoate

- 10 From intermediate 9 (64 g) as colourless oil (55.7 g).

R_f 0.68 (EtOAc).

- Intermediate 13** Methyl 2-(Chlorosulfonylmethyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoate

- 15 Chlorine gas was bubbled through a suspension of intermediate 10 (1.2 g) in 5% aqueous acetic acid (50 ml) at 0°C for 20 min. The suspension was stirred for 20 min, then placed under vacuum to remove excess chlorine for 5 min. The suspension was then extracted with dichloromethane (2 x 50 ml) and the solvent washed with water and brine. The organic layer was dried over magnesium sulfate and evaporated to give the title compound (1.10 g) as pale yellow oil, which slowly crystallised on standing.

- 20 R_f 0.45 (ether).

Similarly prepared were:

- Intermediate 14** *tert*-Butyl 2-Chlorosulfonylmethyl-5-(3,4,4-trimethyl-2,5-dioxo-imidazolidin-1-yl)pentanoate

From intermediate 11 (1.04 g) as a viscous pale yellow oil (0.86 g).

- 25 R_f 0.48 (ether).

- Intermediate 15** *tert*-Butyl 2-Chlorosulfonylmethyl-3-methylbutanoate

From intermediate 12 (50 g) as pale yellow oil (49.9 g).

R_f 0.54 (EtOAc).

- Intermediate 16** *N*-Methyl-2-phenoxyethylamine

- 30 This compound was prepared according to the method described by Grieco and Bahsas (*J. Org. Chem.*, 1987, 52, 5747-5749) from 2-phenoxyethylamine (1.00 g), as a near colourless oil (0.88 g, 81%).

R_f 0.32 (94:5:1 dichloromethane/methanol/ammonium hydroxide).

Intermediate 17 2-Hydroxymethylbenzofuran

To a stirred solution of benzofuran 2-carboxylic acid (2.50 g) in tetrahydrofuran (50 ml) at 0°C under nitrogen was added a solution of lithium aluminium hydride (1.0M; 7.7 ml) in tetrahydrofuran. Stirring was continued for 2 h, allowing the temperature to rise to RT. The mixture was diluted with diethyl ether (50 ml) and quenched with water (30 ml). The aqueous layer was separated and extracted with diethyl ether (2 x 25 ml). The combined extracts were washed with water (30 ml), sodium hydroxide solution (1M; 30 ml), water (30 ml), brine (30 ml) and dried (MgSO₄). Filtration and evaporation of solvents under reduced pressure yielded the title compound (1.11 g, 49%) as a colourless oil.

R_f 0.29 (2:1 hexane/ethyl acetate).

Intermediate 18 2-Chloromethylbenzofuran

To a stirred solution of intermediate 17 (1.10 g) in dichloromethane (50 ml) at RT was added pyridine (646 mg) and 4-toluenesulfonyl chloride (1.56 g). Stirring was continued for 72 h at RT and a further 24 h at reflux. The cooled solution was diluted with dichloromethane (50 ml) and washed with dilute hydrochloric acid (1M; 25 ml), water (2 x 25 ml), brine (25 ml) and dried (MgSO₄). Filtration and evaporation of solvents under reduced pressure and purification of the residue by silica gel column chromatography, eluting with 5:1 hexane/ethyl acetate, yielded the title compound (337 mg, 27%) as a colourless oil.

R_f 0.49 (2:1 hexane/ethyl acetate).

Intermediate 19 N-Methyl Benzofuran-2-yl methylamine

This compound was prepared according to the method of Butera *et al* (*J. Med. Chem.*, 1991, 34, 3212-3228) from intermediate 18 (330 mg), as a near colourless oil (883 mg, 8%).

R_f 0.30 (9:1 dichloromethane/methanol)

Intermediate 20 Diethyl Tetrahydropyran-4,4-dicarboxylate

Diethyl malonate (32.0 g) was added to a solution of sodium ethoxide (1 equivalent) in ethanol and the solution was stirred for 30 min. 2-Bromoethylether (46.0 g) was then added and the mixture was stirred at reflux for 3 h. The mixture was then cooled, evaporated *in vacuo* and the residue partitioned between water and dichloromethane. The organic layer was separated and washed with water and brine, then dried (MgSO₄) and evaporated. The residue was then purified by flash column

chromatography on silica gel, eluting with 4:1 hexanes/ether, to give the title compound (28.0 g) as colourless liquid.

R_f 0.33 (4:1 hexanes/ether).

Intermediate 21 Ethyl 4-Hydroxymethyltetrahydropyran-4-carboxylate

- 5 A solution of di-isobutylaluminium hydride in toluene (82 mmol) was added to a solution of intermediate 20 (9.5 g) in toluene at -40°C over 30 min. The mixture was stirred for 1 h, then ethanol (100 ml) was added dropwise over 30 min. Sodium borohydride (2.0 g) was then added in small portions over 20 min, and the mixture stirred for 1 h. Saturated sodium sulfate (100 ml) was then added dropwise followed by ethyl acetate (200 ml). The mixture was vigorously stirred for 1 h, then filtered through Celite and the filtrate evaporated to give the title compound (5.6 g) as colourless liquid.
- 10 R_f 0.60 (EtOAc).

Intermediate 22 Ethyl 4-(Methanesulfonyloxy)methyltetrahydropyran-4-carboxylate

- 15 Methanesulfonyl chloride (4.6 ml) was added to a solution of intermediate 21 (11.0 g) at 0°C in dichloromethane (30 ml), followed by triethylamine (8.0 ml). The mixture was stirred for 1 h, then washed with citric acid (5% aq, 30 ml), saturated sodium bicarbonate and brine. The organic layer was separated, and then dried (MgSO_4) and evaporated to give the title compound as colourless oil (15.2 g).
- 20 R_f 0.65 (ether).

Intermediate 23 Ethyl 4-(Acetylsulfanylmethyl)tetrahydropyran-4-carboxylate

- A solution of intermediate 22 (16.0 g), sodium iodide (0.2 g) and potassium thioacetate (12.0 g) in dimethylformamide (100 ml) was heated at 80°C for 6 h. The resulting black viscous mixture was then added to aqueous bicarbonate (300 ml) and extracted with ether. The ether layer was washed with water and brine, then dried (MgSO_4) and evaporated. The residue was purified by flash column chromatography on silica gel, eluting with 1:1 ether/hexanes, to give the title compound (6.5 g) as pale yellow oil.
- 25 R_f 0.45 (1:1 ether/hexanes)

Intermediate 24 Ethyl 4-(Chlorosulfonyl)methyltetrahydropyran-4-carboxylate

- 30 Chlorine gas was bubbled through a suspension of intermediate 23 (3.2 g) in water (100 ml) and acetic acid (5 ml) at 0°C for 30 min. The yellow suspension was stirred at the same temperature for 30 min, then partially evaporated under vacuum and the aqueous residue extracted with dichloromethane (100 ml). The combined organic extracts were

washed with iced-cold water and brine, then dried (MgSO_4) and evaporated to give the title compound (3.3 g) as colourless solid.

R_f 0.45 (ether).

Intermediate 25 **2-(4-Chlorophenoxy)-2,2-dimethylpropionyl Chloride**

5 To a stirred solution of 2-(4-chlorophenoxy)-2,2-dimethylpropionic acid (5.00g) in dichloromethane (100 ml) and dimethylformamide (2 drops) at 0 °C under nitrogen was added oxalyl chloride (14.8 g). The mixture was stirred overnight with the temperature rising to RT. The mixture was evaporated under reduced pressure to dryness to yield the title compound (5.26g, 97%) as a brown liquid.

10 R_f 0.65 (5:1 hexane/ethyl acetate).

Intermediate 26 **2-(4-Chlorophenoxy)-2,2-dimethylpropionic Acid N-Methyl Amide**

 To a stirred 40 % aqueous solution of methylamine (20 ml) at 0 °C was added intermediate 25 (1.00g). The mixture was stirred for 30 mins and then the resulting
15 precipitate was collected by filtration and dried *in vacuo* to yield the title compound (576mg, 59%) as a white solid.

R_f 0.47 (2:1 ethyl acetate/hexane).

Intermediate 27 **N-[2-(4-chlorophenoxy)-2,2-dimethylpropyl]-N-methylamine**

 To a stirred solution of intermediate 26 (300 mg) in tetrahydrofuran (10 ml) at 0°C
20 under nitrogen was added a solution of borane-dimethyl sulphide in tetrahydrofuran (2M, 1 ml). The mixture was heated at reflux for 4 h then cooled and diluted with water (30 ml). The mixture was extracted with dichloromethane (3 x 20ml) and the combined extracts were washed with water (2 x 20 ml), brine (20 ml) and dried (MgSO_4). Filtration and evaporation of solvents *in vacuo* yielded a colourless oil. To a stirred solution of the
25 oil in methanol (20 ml) at RT was added concentrated hydrochloric acid (3 ml). The mixture was stirred for 2.5 h then diluted with water (80 ml) and washed with hexane (2 x 20 ml). The aqueous mixture was basified (2M NaOH; pH 12) and extracted with dichloromethane (5 x 20 ml). The combined organic fractions were washed with water (2 x 20 ml), brine (20 ml) and dried (Mg SO_4). Filtration and evaporation of solvents *in*
30 *vacuo* yielded the title compound (146mg, 58 %) as a colourless oil.

R_f 0.32 (94:5:1 dichloromethane/methanol/ammonium hydroxide).

Intermediate 28 **N-(tert-Butyloxycarbonyl)-4-piperidin 1**

 Was prepared according to the method of K.M. Wells *et al* (*Tetrahedron Lett.*, 1996, 37(36), 6439-6442) as a pale yellow solid (46.5 g, 99%)

R_f 0.67 (EtOAc)

Intermediate 29 4-(Piperidin-4-yl xy)pyridine, Bis(Trifluoroacetate)

- Sodium hydride (1.8 g) was added to a solution of intermediate 28 (3.4 g) in dimethylformamide (15 ml), cooled in ice, and held under nitrogen. The suspension was then stirred at room temperature for 1 h, treated with 4-chloropyridine hydrochloride (2.7 g), and heated to 100°C for a further 2 h. After cooling, the mixture was partitioned between diethyl ether (100 ml) and water (100 ml). The organic phase was collected, washed with water (20 ml), saturated brine (20 ml), dried (Na₂SO₄) and evaporated to dryness *in vacuo*. The beige solid residue was recrystallised from diethyl ether to provide the intermediate ether as a crystalline pale brown solid (4.24 g). The recrystallised solid was then dissolved in dichloromethane (80 ml), treated with trifluoroacetic acid (20 ml), and stirred at room temperature for 16 h. The mixture was then concentrated under reduced pressure and co-evaporated with 50 % dichloromethane/hexane (20 ml) to provide the title compound as a beige solid (4.8 g, 70%).
- R_f 0.11 (8% methanol/dichloromethane with trace triethylamine)

Similarly prepared were:

Intermediate 30 4-(4-Cyanophenyloxy)piperidine, Trifluoroacetate

- From intermediate 28 (3.0 g) and 4-fluorobenzonitrile (1.95 g), as a colourless solid (1.34 g, 28 %)
- R_f 0.1 (50% hexane and 0.1% AcOH in EtOAc)

Intermediate 31 4-(4-Chlorophenyloxy)piperidine, Hydrochloride

- Sodium hydride, as a 60% dispersion in mineral oil (2.11 g) was added to a solution of intermediate 28 (10.0 g) in anhydrous dimethylsulfoxide (200 ml). After stirring for 30 min at RT under nitrogen, potassium benzoate (8.46 g) was added, followed, after 20 min, by 1-chloro-4-fluorobenzene (6.90 g). The mixture was heated at 60°C for 2 h, then cooled to RT and diluted with water (600 ml) and the pH adjusted to 5. The solution was washed with hexane (100 ml), basified to pH 11, then extracted with ethyl acetate (3 x 100 ml). The combined ethyl acetate extracts were washed with saturated aqueous brine (50 ml), dried over sodium sulfate and evaporated, and then the residue was crystallised from hexane. The crystalline solid obtained was dissolved in a mixture of ethanol and dioxane (1:1, 150 ml) and saturated with hydrogen chloride gas. After 2 h at RT, the solution was purged with nitrogen gas and then concentrated under reduced pressure. The residue was dissolved in a minimum amount of methanol, and then diluted with ether. The

precipitate which formed was collected by filtration and dried to give the title product (5.36 g, 41%) as a colourless solid.

R_f 0.35 (8% MeOH/dichloromethane)

Intermediate 32 *N*-(*tert*-Butoxycarbonyl)-4-piperidone

- 5 This compound was prepared according to the method of I. M. Labouta *et al*, *Eur. J. Med. Chem. Chim. Ther.*, 1982, 17, 531-535, as a colourless solid (9.72 g, 98%).

Intermediate 33 *tert*-Butyl 4-Hydroxyiminopiperidine-1-carboxylate

- Hydroxylamine hydrochloride (2.95 g), sodium acetate (3.80 g) and intermediate 32 (7.70 g) were combined in ethanol (40 ml) and stirred at room temperature for 72 h.
10 Water (100 ml) was added, and the mixture extracted with diethyl ether (2 x 50 ml). The combined organic extracts were washed with saturated sodium bicarbonate (2 x 30 ml), water (30 ml), saturated brine (30 ml), dried (MgSO₄) and concentrated *in vacuo* to provide the title compound (7.94 g, 96%) as a pale yellow solid.

R_f 0.30 (2% methanol/dichloromethane with trace triethylamine)

- 15 **Intermediate 34** *tert*-Butyl 4-(4-Cyanophenoxyimino)piperidine-1-carboxylate

- Sodium hydride, as a 60% dispersion in mineral oil (0.103 g), was added to a solution of intermediate 33 (0.50 g) in anhydrous tetrahydrofuran (30 ml), and the mixture stirred under nitrogen at room temperature. After 30 min, 4-fluorobenzonitrile was added as a solution in dry tetrahydrofuran (3 ml), and the mixture stirred for a further 24 h at
20 room temperature. The solvents were then removed *in vacuo*, the residue azeotroped twice with toluene before purification by silica gel column chromatography, with 2% methanol/dichloromethane as eluent, to provide the title compound (0.57 g, 78%) as a pale yellow solid.

R_f 0.63 (2% methanol/dichloromethane with trace triethylamine)

- 25 Similarly prepared was:

Intermediate 35 *tert*-Butyl 4-(4-Chlorobenzyloxyimino)piperidine-1-carboxylate

- From intermediate 33 (0.80 g) and 4-chlorobenzyl bromide, as a colourless solid (0.54 g, 43%) after purification by silica gel column chromatography with 7% diethyl
30 ether/dichloromethane as eluent.

R_f 0.50 (7% diethyl ether/dichloromethane)

Intermediate 36 4-(4-Cyanophenoxyimino)piperidine, Trifluoroacetate Salt

Trifluoroacetic acid (1 ml) was added to a solution of intermediate 34 (0.56 g) in dichloromethane (9 ml). After stirring for 6 h at room temperature, the solvents were

removed *in vacuo*. The residue was dissolved in dichloromethane (1 ml) and diluted with diethyl ether to induce crystallisation. The mixture was cooled, filtered and washed with diethyl ether to furnish the title compound (0.56 g, 96%) as a off-white solid.

R_f 0.28 (8% methanol/dichloromethane with trace triethylamine)

5 Similarly prepared was:

Intermediate 37 4-(4-Chlorobenzoyloxyimino)piperidine, Trifluoroacetate Salt

From intermediate 35 (0.54 g), as a white solid (0.49 g, 87%).

R_f 0.15 (3% methanol/dichloromethane with trace triethylamine)

10 **Example 1** Methyl 2-((2-Phenoxyethylsulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoate

To a stirred solution of intermediate 13 (500 mg) in dichloromethane (25 ml) at 0°C were added 2-phenoxyethylamine (186 mg) and triethylamine (137 mg). Stirring was continued for 18 h, with the temperature rising to RT. The reaction mixture was diluted with dichloromethane (50 ml) and washed with water (2 x 20 ml), hydrochloric acid (1M; 15 20 ml), water (20 ml), brine (20 ml) and then dried (MgSO₄). Filtration and evaporation of solvents *in vacuo* yielded the title compound (581 mg, 91%) as a colourless oil.

HPLC-MS Conditions

In the following experimental descriptions, HPLC-MS was performed on a Hewlett Packard 1100 LC using a Phenomenex Luna C18, 50x2.1mm column at 35°C, running a solvent A: solvent B gradient of 95:5 to 35:65 in 4.70 min and to 0:100 in 1.50 min at a flow rate of 0.90 mL/min. Solvent A and solvent B are 95% water:5% acetonitrile 0.1% formic acid and 5% water: 95% acetonitrile 0.1% formic acid respectively. MS spectra were acquired at 1 cone voltage (30V), on a Micromass Quattro (triple quadrupole) instrument

10 **Example 43** **2-((N-Ethyl-N-(2-methoxyethyl)-sulfamoylmethyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)-pentanoic Acid N-Hydroxy Amide**

(2-Methoxyethyl)ethylamine (0.1 mmol) was added to a solution of intermediate 15 (0.1 mmol) and *N*-methylmorpholine (1.1 eq) in dichloromethane (1 ml) at 0°C in a scintillation vials and the solutions was stirred overnight at room temperature. The solutions was washed with 0.2 M HCl (1 ml) and saturated bicarbonate solution, then evaporated to dryness. The crude product was dissolved in 50% trifluoroacetic acid/dichloromethane (1 ml) and stirred overnight at room temperature, then evaporated to dryness and azeotroped with toluene. The crude acids were then taken up in dichloromethane, and then treated with one equivalent each of EDC, hydroxylamine hydrochloride and *N*-methylmorpholine for 18 h. The solution was then washed with water and aqueous sodium bicarbonate, and evaporated. The crude product was purified by preparative HPLC, to give the title compound as a colourless foam (10.8 mg)

HPLC R_f 5.32 min.

5 MS 468 (M⁺)

Example 52 2-(N-(2-(2-Chlorophenoxy)ethyl)-N-methyl-sulfamoylmethyl)-
5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)-pentanoic Acid
N-Hydroxy Amide

From intermediate 15 and N-(2-(2-chlorophenoxy)ethyl)methylamine, as a brown

10 solid (5.5 mg).

HPLC R_t 5.68 min.

MS 518 (M⁺)

Example 53 2-(N-Ethyl-N-phenylsulfamoylmethyl)-5-(3,4,4-trimethyl-2,5-
dioxo-imidazolidin-1-yl)-pentanoic Acid N-Hydroxy Amide

15 From intermediate 15 and N-ethylaniline, and a colourless solid (9.0 mg).

HPLC R_t 5.89 min.

MS 454 (M⁺)

Example 54 2-(N-(4-Chlorophenyl)-N-methylsulfamoylmethyl)-5-(3,4,4-
trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoic Acid N-
20 Hydroxy Amide

From intermediate 15 and N-(4-chlorophenyl)methylamine, as a white solid (3.2
mg).

HPLC R_t 5.69 min.

MS 474 (M⁺)

CLAIMS

1. A compound for therapeutic use, represented by formula (I):

wherein

10 m is 0-2;

X is $\text{S}(\text{O})_{1-2}$;

Y is OH or NHOH ;

R^1 is H or a group (optionally substituted with R^7) selected from C_{1-6} alkyl, C_{2-6} alkenyl, aryl, C_{1-6} alkyl-aryl, heteroaryl, C_{1-6} alkyl-heteroaryl, heterocycloalkyl, C_{1-6} alkyl-heterocycloalkyl, cycloalkyl and C_{1-6} alkyl-cycloalkyl, and R^2 is H or C_{1-6} alkyl;

or CR^1R^2 is a cycloalkyl or heterocycloalkyl ring optionally substituted with R^7 or a group (optionally substituted with R^7) selected from C_{1-6} alkyl, aryl, C_{1-6} alkyl-aryl, heteroaryl and C_{1-6} alkyl-heteroaryl;

each B is the same or different and is H or a group selected from C_{1-6} alkyl-aryl, C_{1-6} alkyl, cycloalkyl, C_{1-6} alkyl-cycloalkyl, cycloalkenyl, heterocycloalkenyl, C_{1-6} alkyl-heteroaryl, heterocycloalkyl, C_{1-6} alkyl-heterocycloalkyl, aryl or heteroaryl, any of which groups is optionally substituted by a substituent selected from R^3 , C_{1-6} alkyl- R^3 , C_{2-6} alkenyl- R^3 , aryl (optionally substituted with R^3), aryl- C_{1-6} alkyl- R^3 , C_{1-6} alkyl-aryl (optionally substituted with R^3), C_{1-6} alkyl-heteroaryl (optionally substituted with R^3), aryl- C_{2-6} alkenyl- R^3 , heteroaryl (optionally substituted with R^3), heteroaryl- C_{1-6} alkyl- R^3 , cycloalkyl (optionally substituted with R^3) and heterocycloalkyl (optionally substituted with R^3), provided that NB_2 is not NH_2 ,

or B-N-B is a heterocycloalkyl ring substituted with $=\text{O}$ or $=\text{NOR}^4$,

or, when neither R^1 nor R^2 is H , B-N-B is a heterocycloalkyl or heterocyclalkenyl ring optionally substituted by a substituent selected from R^3 , C_{1-6} alkyl- R^3 , C_{2-6} alkenyl- R^3 , aryl (optionally substituted with R^3), aryl- C_{1-6} alkyl- R^3 , C_{1-6} alkyl-aryl (optionally substituted with R^3), C_{1-6} alkyl-heteroaryl (optionally substituted with R^3), aryl- C_{2-6} alkenyl- R^3 , heteroaryl (optionally substituted with R^3), heteroaryl- C_{1-6} alkyl- R^3 , cycloalkyl (optionally substituted with R^3), and heterocycloalkyl (optionally substituted with R^3);

R^3 is C_{1-6} alkyl, C_{2-6} alkenyl- R^5 , halogen, CN, NO_2 , $N(R^4)_2$, OR^4 , $C(=NOR^6)R^4$, $CON(R^4)_2$, COR^4 , CO_2R^8 , NR^4R^5 , $S(O)_{0-2}R^6$ or $SO_2N(R^4)_2$;

R^4 is H or a group selected from C_{1-6} alkyl, aryl, C_{1-6} alkyl-aryl, heteroaryl, C_{1-6} alkyl-heteroaryl, cycloalkyl, C_{1-6} alkyl-cycloalkyl, heterocycloalkyl and C_{1-6} alkyl-heterocycloalkyl, wherein said group is optionally substituted with R^6 , COR^6 , $SO_{0-2}R^6$, CO_2R^6 , OR^6 , $CONR^6R^6$, NR^6R^6 , halogen, CN, $SO_2NR^6R^6$ or NO_2 , and for each case of $N(R^4)_2$ the R^4 groups are the same or different or $N(R^4)_2$ is heterocycloalkyl optionally substituted with R^6 , COR^6 , $SO_{0-2}R^6$, CO_2R^6 , OR^6 , $CONR^6R^6$, NR^6R^6 , halogen, CN, $SO_2NR^6R^6$ or NO_2 ;

10 R^5 is COR^4 , $CON(R^4)_2$, CO_2R^6 or SO_2R^6 ;

R^6 is C_{1-6} alkyl, aryl, C_{1-6} alkyl-aryl, heteroaryl or C_{1-6} alkyl-heteroaryl; and

R^7 is OR^4 , COR^4 , CO_2R^8 , $CON(R^4)_2$, NR^4R^5 , $S(O)_{0-2}R^6$, $SO_2N(R^4)_2$, halogen, CN or cycloimidyl (optionally substituted with R^8); and

R^8 is H or C_{1-6} alkyl;

15 and the salts, solvates, hydrates, N-oxides, protected amino, protected carboxy, or protected hydroxamic acid derivatives thereof.

2. A compound of formula (I) as defined in claim 1, independent of use, wherein Y is OH, provided that CR^1R^2 is not CH_2 and/or NB_2 is not NH_2 , $N(Ph)H$, $N(Ph)CH_3$, $N(C_6H_{11})CH_3$ or $N(4\text{-methoxybenzyl})_2$.

20 3. A compound of formula (I) as defined in claim 1, independent of use, wherein Y is NHOH.

4. A compound of any preceding claim, wherein X is SO_2

5. A compound of any preceding claim, wherein R^3 is C_{1-6} alkyl, C_{2-6} alkenyl- R^5 , halogen, CN, NO_2 , $N(R^4)_2$, OR^4 , COR^4 , NR^4R^5 , $S(O)_{0-2}R^6$ or $SO_2N(R^4)_2$.

25 6. A compound of any preceding claim, wherein R^7 is $CON(R^4)_2$, NR^4R^5 , $SO_2N(R^4)_2$ or cycloimidyl.

7. A compound of any preceding claim, wherein R^1 is optionally substituted C_{1-6} alkyl, C_{1-6} alkyl-heteroaryl, or C_{1-6} alkyl-heterocycloalkyl.

8. A compound of any of claims 1 to 6, wherein CR^1R^2 is optionally substituted
30 cycloalkyl or heterocycloalkyl.

9. A compound of any preceding claim, wherein independently each B is optionally substituted alkyl, cycloalkyl, heterocycloalkyl, C_{1-6} alkyl-aryl or C_{1-6} alkyl-heteroaryl.

10. A compound of any of claims 1 to 9, wherein B-N-B is optionally substituted heterocycloalkyl optionally substituted with $=NOR^4$.

11. A compound of any of claims 1 to 3, selected from
 - methyl 2-((2-phenoxyethylsulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoate,
 - methyl 2-((N-methyl-(2-phenoxyethyl)sulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoate,
 - 5 methyl 2-((N-methyl-(2-(4-chlorophenoxy)ethyl)sulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoate,
 - tert*-butyl 2-((N-methyl-(benzofuran-2-yl)methylsulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoate,
 - 10 2-((2-phenoxyethylsulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoic acid,
 - 2-((N-methyl-(2-phenoxyethyl)sulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoic acid,
 - 2-((N-methyl-(2-(4-chlorophenoxy)ethyl)sulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoic acid,
 - 15 2-((N-methyl-(benzofuran-2-yl)methylsulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoic acid,
 - 2-((2-phenoxyethylsulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoic acid N-hydroxy amide,
 - 20 2-((N-methyl-(2-phenoxyethyl)sulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoic acid N-hydroxy amide,
 - 2-((N-methyl-(2-(4-chlorophenoxy)ethyl)sulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoic acid N-hydroxy amide, and
 - 2-((N-methyl-(benzofuran-2-yl)methyl-sulfamoyl)methyl)-5-(3,4,4-trimethyl-2,5-dioxoimidazolidin-1-yl)pentanoic acid N-hydroxy amide.
 - 25
12. A compound of any of claims 1 to 5, which is exemplified herein but not in claim 11.
13. A compound of any preceding claim, in the form of a single enantiomer or diastereomer.
- 30 14. A pharmaceutical composition for use in therapy, comprising a compound of any preceding claim, and a pharmaceutically-acceptable diluent or carrier.
15. Use of a compound of any of claims 1 to 13, for the manufacture of a medicament for the treatment or prevention of a condition associated with matrix metalloproteinases

or that is mediated by TNF α or enzymes involved in the shedding of *L*-selectin, CD23, the TNF receptors, IL-6 receptors or IL-1 receptors.

16. Use according to claim 15, wherein the condition is selected from cancer, inflammation and inflammatory diseases, tissue degeneration, periodontal disease, ophthalmological disease, dermatological disorders, fever, cardiovascular effects, haemorrhage, coagulation and acute phase response, cachexia, anorexia, acute infection, HIV infection, shock states, graft versus host reactions, autoimmune disease, reperfusion injury, meningitis, migraine and aspirin-independent anti-thrombosis.
17. Use according to claim 15, wherein the condition is selected from tumour growth, angiogenesis, tumour invasion and spread, metastases, malignant ascites and malignant pleural effusion.
18. Use according to claim 15, wherein the condition is selected from cerebral ischaemia, ischaemic heart disease, rheumatoid arthritis, osteoarthritis, osteoporosis, asthma, multiple sclerosis, neurodegeneration, Alzheimer's, atherosclerosis, stroke, vasculitis, Crohn's disease and ulcerative colitis.
19. Use according to claim 15, wherein the condition is selected from corneal ulceration, retinopathy and surgical wound healing.
20. Use according to claim 15, wherein the condition is selected from psoriasis, atopic dermatitis, chronic ulcers and epidermolysis bullosa.
21. Use according to claim 15, wherein the condition is selected from periodontitis and gingivitis.
22. Use according to claim 15, wherein the condition is selected from rhinitis, allergic conjunctivitis, eczema and anaphylaxis.
23. Use according to claim 15, wherein the condition is selected from restenosis, congestive heart failure, endometriosis, atherosclerosis and endosclerosis.
24. Use according to claim 15, wherein the condition is selected from pelvic inflammatory disease (PID), age-related macular degeneration and cancer-induced bone resorption.
25. Use according to claim 15, wherein the condition is a lung disease.
26. Use according to claim 25, wherein the condition is selected from cystic fibrosis adult respiratory distress syndrome (ARDS), emphysema, bronchitis obliterans-organising pneumonia (BOOP), idiopathic pulmonary fibrosis (PIF), diffuse alveolar damage, pulmonary Langerhan's cell granulomatosis, pulmonary lymphangioleiomyomatosis (LAM) and chronic obstructive pulmonary disease (COPD).

* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier document but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

"&" document member of the same patent family
